HLS® 9000 Swing Door Quick-Fit Handle Set

- Position one o-ring over the nylon bushing and place it in the hole of the backplate. The other o-ring should be placed over the handle.
- Apply the Backplate Gasket to the inside of each Backplate. Push Gaskets firmly into place to ensure a tight seal. Snap a Nylon Bushing into the handle hole of each Backplate.
- Attach Interior and Exterior Backplates to door and fasten loosely with the M5 Phillips Head Backplate Screws provided. Note: The screw heads must be on the interior side of the door.
- If the handles are handed, determine which one is the Exterior Handle. Push Shaft into Exterior Handle until it stops.
- Holding Exterior Handle in the proper horizontal position, insert the handle with shaft attached through the Backplate and door gear handle hole, until handle is firmly seated against the Nylon Bushing.
- While holding Exterior Handle in place, slide Interior Handle onto shaft and press both handles together until secure and tight to Backplates.
- Insert the Key/Knob Cylinder or Thumbturn Insert from the interior side of the door until cylinder body is flush with Backplate.
- Install the Cylinder Screw through the screw hole below the deadbolt in the edge of the door to secure in place.
- Hand-tighten Backplate Screws. Note: If handles seem loose after tightening Backplates, push handles together again until tight.

TILT & TURN

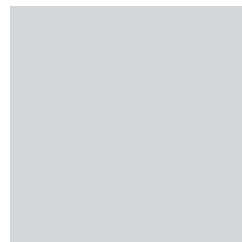

Handle Globe

The Handle Globe is the perfect complement to our Tilt & Turn window. When it comes to enhancing the aesthetics and functionality of your windows, selecting the right hardware is essential. That's why we've chosen to install the Handle Globe alongside our premium Tilt & Turn window.

Colors : White

Gray

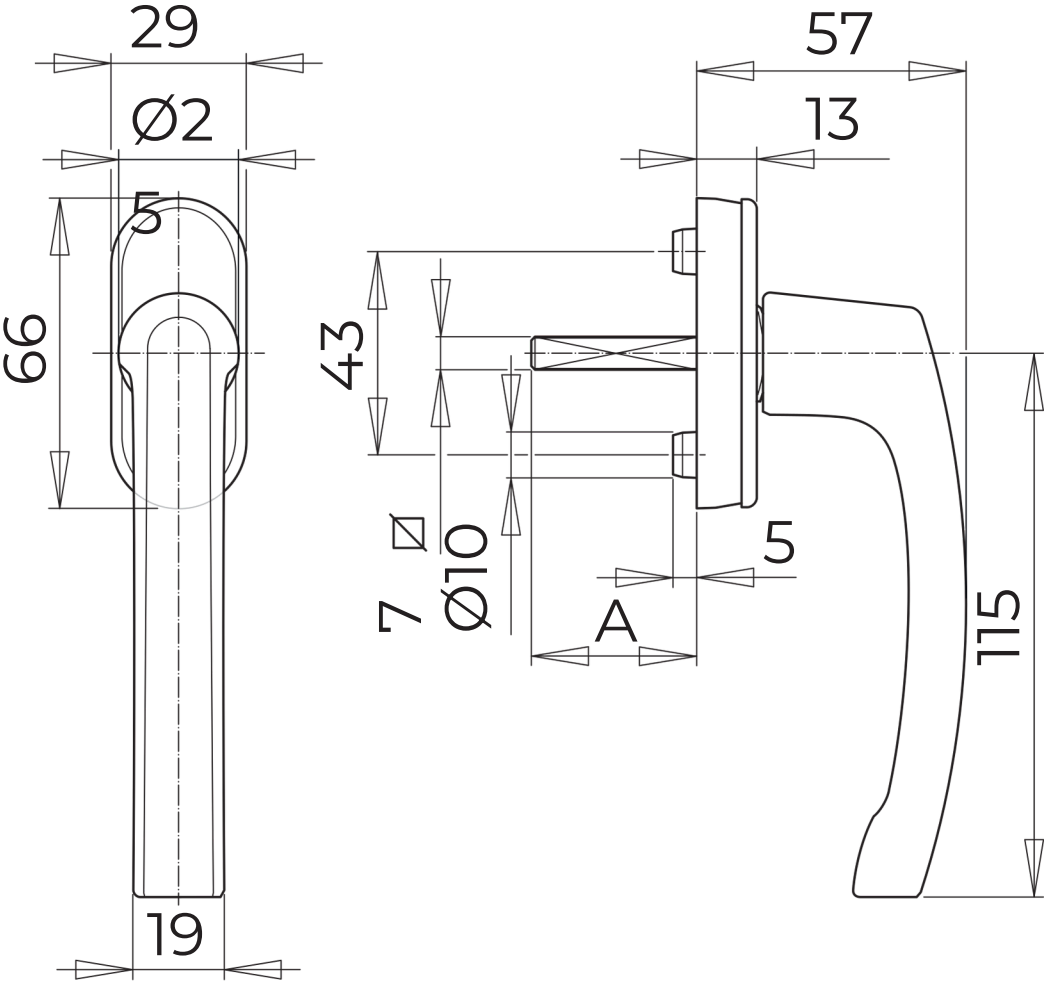

BRONZE

Handle Globe

- Air gap handle: with 45° lock-in position, available as standard version (same appearance)
- Push button handle: Automatically prevents hardware manipulation from outside, unlocking via push button, automatic handle blocking when locked
- 40 Nm, lockable: with pressure cylinder (push to lock, key unlocking)
- 100 Nm, lockable: optionally with secustik function, with pressure cylinder (push to lock, key unlocking), certified in accordance with DIN EN 1627–1630
- Tilt-before-turn handle: Use with corresponding TBT hardware („tilt-before-turn“), 40 Nm, lockable (same appearance), separate key activation for the turning position (increased protection against unauthorised rotary opening)
- Removable handle with slide-on rose: firmly mounted, yet retractable rose, handle can be removed and re-attached at any time (for example, for cleaning)
- Flat handle: For installation locations with insufficient space for the handle (for example, with blinds), can also be used for fold and slide hardware
